Commodity Trend's 15 Trading Tips

- You must strictly enter into the calls at the given recommended price (BUY or SELL price)
- Once Target1 reaches, use trailing STOPLOSS at the comfortable level in order to protect your profit
- Based on the market condition, exit from Target1 and withdraw portion of your profits
- Strictly exit from the script, once Target2 reaches
- Strictly maintain the STOPLOSS
- Split your money and trade in all our recommendations to average out profit
- If the script opens at the Target1 price, don't enter into the script even though it is available at the recommended price in the intra-day market until unless you get the intimation from us
- Don't get afraid if it goes below the recommended price. Be patient to reach its targets. STOPLOSS is there to protect your value.
- Don't take excess position beyond your limit. Be a SMART trader.
- Don't expect profit in every trade. Don't trade to cover your loss; otherwise you will end up losing more.
- Don't follow the Tips from unreliable source; just because of it is available for FREE.
- Don't chase behind the script, just because of everyone is chasing behind.
- We recommend you NOT to trade as soon as market opens. Wait for 10-15 minutes until you identify current market trend.
- Always trade in the direction of current market trend. If trend is BULLISH, trade on our BUY calls, else trade on our SELL calls.
- Listen what your MIND says, rather than HEART. Control your emotion.
